Install Instructions for Cumulative Effects Model
DeltaQ V. 1.0
FOREST V. 1.0 beta

- All program files and documentation are located in the downloaded file - DQ_FORESTbeta2006.zip. Unzip DQ_FORESTbeta2006.zip to a temporary directory– it is in winzip format. Using Windows Explorer, you should see the following files:
- Setup.lst, Cemod.cab, Setup.exe.

To install FOREST and DeltaQ, double Click on setup.exe to start the setup program. It will lead you through the usual questions – are all other applications closed, where do you want to put the program - follow the defaults.

DO NOT INSTALL THIS PROGRAM IN THE "PROGRAM FILES" DIRECTORY.

Licenses
Forest and DeltaQ require an Arc9.x license and software located on the PC. Previous versions were tested with Arc 8.2, but the current version has not. There is a good chance that it will work on Arc8. It has been tested with an ArcInfo full license installed. This software will not work on UNIX systems.

Error Messages
If you get a message that says "**Unable to generate log file**, …" etc. Please talk to your systems administrator, you need permissions to load the software onto your PC.
